ET-100 HANDHELD THERMAL EMISSOMETER

Total hemispherical emittance measurements

The ET-100 measures directional reflectance from 1.5 to 21 µm and, based on those values, calculates directional and total hemispherical emissivity. The ET100 Emissometer conforms to ASTM E408, the standard test method for the determination of emittance using a portable instrument. In-band reflectance data for six discrete bands.

BENEFITS

ASTM compliant Use for ASTM E408 and E1980.

■ 6 discrete bands 1.5-2.0, 2.0-3.5, 3.0-4.0, 4.0-5.0, 5.0-10.5, 10.5-21.

 Immediate warm up
 90 sec warm up, no equilibration between measurements.

Room temperature samples Calculate emissivity without heating sample.

• Two incident angles Data for 20° and 60° angles of incidence.

Emittance for multiple materials Metals & dielectrics.

• Elevated temperature model Calculate emittance at any temperature Kelvin.

In-Band spectral resolution

Increased accuracy over broadband for selective radiating materials.

Gier Dunkle DB-100 Replacement for discontinued DB-100.

APPLICATIONS

Space Coatings Thermal control | α/ε | Thermo-optical properties

Defense | Aerospace IR Signature | Low observable paint & coatings

Radiative Heat Transfer Absorptance for thermal modeling

Semiconductors
Wafer fab hardware emissivity

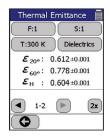

Cool Building Materials SRI | ASTM | LEED

Energy Nuclear | Concentrated Solar

SPECIFICATIONS ET-100

	ET-100					
MEASURED DATA	ТА					
Measured Parameter	Directional hemispherical reflectance (DHR)					
Method	Integrated total reflectance in a band for a given angle of incidence					
Measured Value	Absolute reflectance (0-1)					
Calculated Value	Directional thermal emissivity at 20°, directional thermal emissivity at 60°, hemispherical thermal emissivity					
Wavelength Bands (microns)	1.5-2.0, 2.0-3.5, 3.0-4.0, 4.0-5.0, 5.0-10.5, 10.5-21					
Angle of Incidence	20° & 60° from normal incidence					
ASTM Standards	E903					
Calibration Coupon	Specular Gold					
PERFORMANCE						
Accuracy	+/03					
Repeatability	±.005 units					
Beam Spot Size	0.50 inches					
Measurement Time	10 sec					
Sample Size & Geometry	Flat: ≥ 0.5 in. diameter Curved: 6 in. convex; 12 in. concave					
Warm Up Time	90 seconds					
Time Between Measurements	2 seconds					
Sample Temperature	Ambient or heated/cooled to 0 - 100° C					
Operating Temp	0° to 40° C					
POWER						
Run Time	2 hours on one battery. Battery easily replaced with continuous operation after battery replacement.					
Power Source	Rechargeable battery (standard environmentally friendly NiMH)					
Battery Recharge Time	1 hour					
IR Source	Kanthal filament operated at about 1,000°C					
ENVIRONMENT						
Storage	-25° to 70°C					
Operating	0° to 40° C					
DIMENSIONS						
Weight	4.7 lbs					
Form Factor/Size	H 11.54", L 9.04", W 3.27" (29.31 cm x 22.96 cm x 9.44 cm)					
INTERFACE						
Operator Interface	LCD graphics screen, 1/4 VGA, touch screen, software buttons; trigger switch in handle					
Inspection Applications	Pass/fail can be incorporated, user set values					
Diagnostics	On screen status and signals monitor. Signal values stored with data. Raw data collection and display.					
MISCELLANEOUS						
Date Format	Data files can be opened and post processed with Excel or a text processor					
Data Storage	Removable SanDisk (SD) card					
Export control	ECCN #3A999.F					

410 SERIES REFLECTOMETERS & EMISSOMETERS

HANDHELD CONFIGURATION

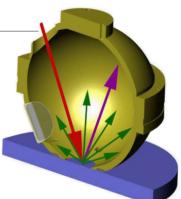

BENCHTOP CONFIGURATION

METHODOLOGY

The basic structure of a measurement head is an internal source, a modified integrating sphere, and detectors. The reflectance measurement is made by collimating the source beam onto the target, the energy is reflected back into the sphere, and eventually detected or dissipated.

The 410 Series Reflectometers measures the integrated surface reflectance of a surface at a given angle of incidence (20° or 60°). The integrating sphere captures the reflected light from the target material, integrating reflections in all directions. Wavelength-filtered detectors measure the total light reflected in each wavelength band and converts it to an analog electrical signal.

The 410 Series Reflectometer electronics processes the detector signals for initial amplification (fixed), filtering, offset adjustment, secondary amplification (variable), and analog to digital conversion. The digitized signals are read by the on-board processor, stored in memory, and then used to determine the target sample reflectance at each incident angle and wavelength band. Those reflectances are used to calculate additional properties such as directional thermal emittance or total hemispherical emittance. Results are displayed on the liquid crystal display touchscreen, and stored on a SecureDigital (SD) card.

CALIBRATION COUPON

CALIBRATION

An easy calibration process is required before each measurement session. The software GUI will walk the user through the process. Calibration is performed using calibration coupon(s) with known reflectance values.

410 REFLECTOMETERS MODEL COMPARISON GUIDE

The SOC410 Series Reflectometers are portable contact measurement devices designed to take precise, accurate reflectance and emittance measurements. Made with an ergonomic power-drill design, the SOC410 Series lets you easily take measurements in-the-field or around the lab—no cords or external batteries necessary. The world's largest defense, aerospace, and energy companies rely on SOC410 data.
