Soil reflectance measurements were taken using the PSR-3500 field portable spectroradiometer using its standard 4 degree field of view lens from a distance of 1 meter at an exposure time of 1 second (blue trace). Solar radiance of the reflected light (red trace) was also captured in the same measurement. Soil scan was taken on site at the Railroad Valley Playa in Nevada on June 22, 2011; latitude 38.50971, longitude -115.70020, GPS time 8:21:05PM.

Mineral Reflectance Studies

Reflectance of kaolinite (purple), illite (green), montmorillonite (red) and SRM-1920 (cyan) was measured and charted simultaneously using the DARWin SP Data Acquisition Module. PSR Series Spectroradiometers can collect spectra in as little as 100 milliseconds. The exclusive DARWin SP Data Acquisition Module included with each unit allows for full featured instrument control and data handling and is compatible with a range of third party analysis software, including specMIN™ and GRAMS™.

Order a PSR Series Portable Spectroradiometer with a shoulder strap, backpack, or a tripod. It delivers:

Leaf Reflectance

Rhododendron decorum (green trace) and *Acer saccharum* (red trace) leaf reflectance were measured using a SPECTRAL EVOLUTION PSR-3500 Spectroradiometer using the companion SPECTRAL EVOLUTION ILM-105 Fiber Optic Illumination Module fitted with an optional 1 meter bifurcated fiber optic cable. The graphs were generated using the easy-to-use DARWin SP Data Acquisition and Analysis software included with each PSR-Series Spectroradiometer. DARWIN SP allows users to plot multiple scans on the same graph for easy comparison and analysis. All units feature automatic exposure control and auto-shutter for simple operation.
